Patel Mann (12502080603008)

Agenda

01

Overview

Features and the two passes

02

Design

Architecture, database, code, flow, game

03

Demo

Console screenshots

Overview: a pass-based guessing game

2	3	4	25,000
Pass types	Bet tiers	MySQL tables	Starting coins

- Universal pass ($100/month, food and drinks) and Marvel pass ($50/month, drinks)
- Sign-up is verified by a 4-digit OTP emailed through Gmail SMTP
- Players pick a bet tier, guess a number, and a win doubles the balance
- Methods: Universal_Signup, Universal, Marvel_Signup, Marvel, ValidityCheck

Key features

OTP sign-up

Email verification with a 4-digit code before a pass is issued

Two passes

Universal and Marvel, each monthly, quarterly or yearly

Guessing game

Three bet tiers with different odds; wins double the balance

Validity check

Shows the expiry date and the days left on a pass

The two passes

Universal pass

$100 / month

- Food and drinks included
- Full game access

Marvel pass

$50 / month

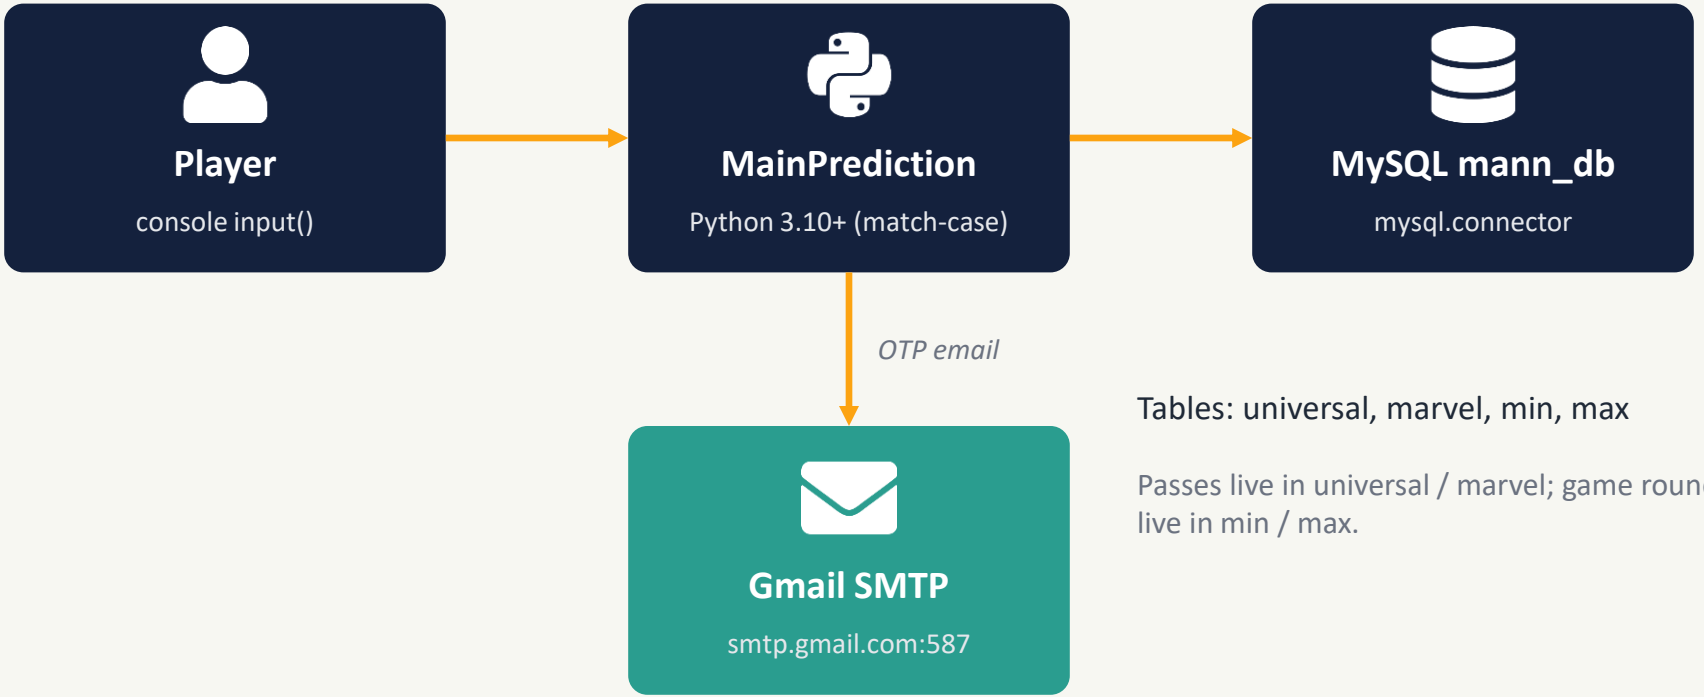

- Drinks included
- Full game access

10% off Monthly

15% off Quarterly

20% off Yearly

Architecture

Tables: universal, marvel, min, max

Passes live in universal / marvel; game rounds live in min / max.

Database: mann_db

universal

Universal pass holders

`name, gender, email, mobile, otp, start, expire, validity`

marvel

Marvel pass holders

`name, gender, email, mobile, otp, start, expire, validity`

min

Rounds by Universal players

`name, initial, bet, guessed, actual, result, final`

max

Rounds by Marvel players

`name, initial, bet, guessed, actual, result, final`

Code structure

`Universal_Signup`	Collect details, email OTP, sell the $100 pass
`Universal`	Rules, nickname, bet loop using table min
`Marvel_Signup`	Same sign-up flow for the $50 pass
`Marvel`	Same game loop using table max
`ValidityCheck`	Look up a pass and show days left
`Main loop`	Time-of-day greeting; Login, Sign-up, Validity, Exit

User journey

1

Sign-up

Name, gender, mobile, email

2

Verify OTP

4-digit code by email

3

Buy a pass

Monthly, quarterly or yearly

4

Play

Pick a bet, guess a number

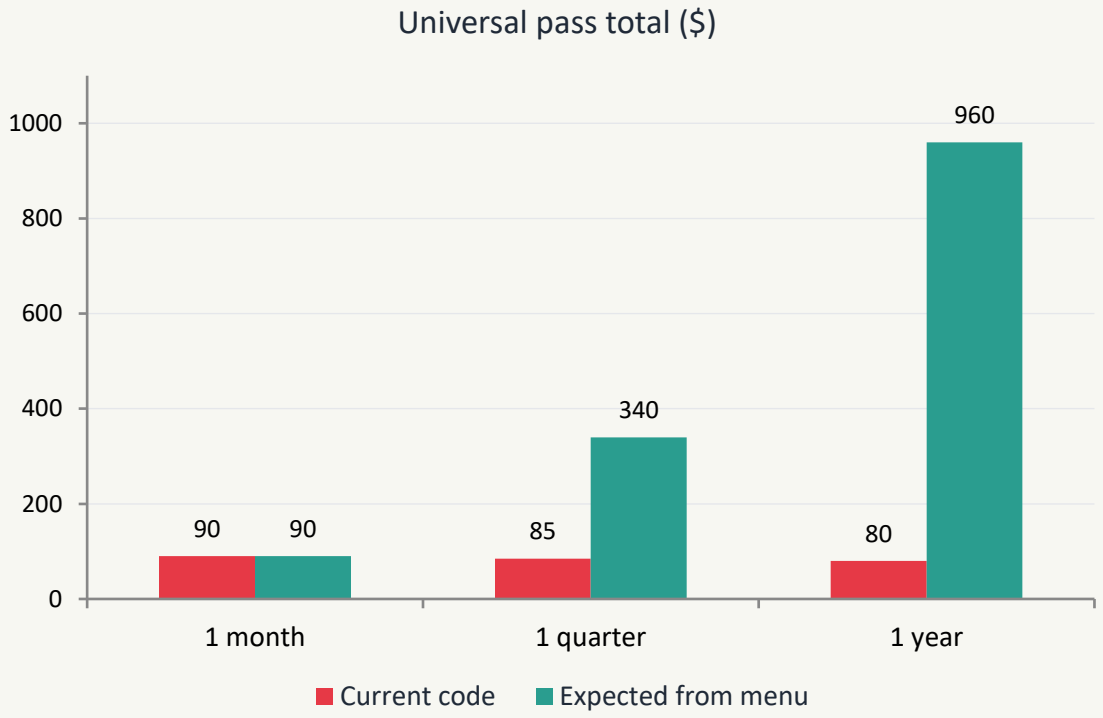

5

Cash out

Balance shown at counter

Login path: name + mobile are checked against the pass table, then the game starts. A separate menu option shows days left on a pass.

Pricing: what the code charges vs the menu

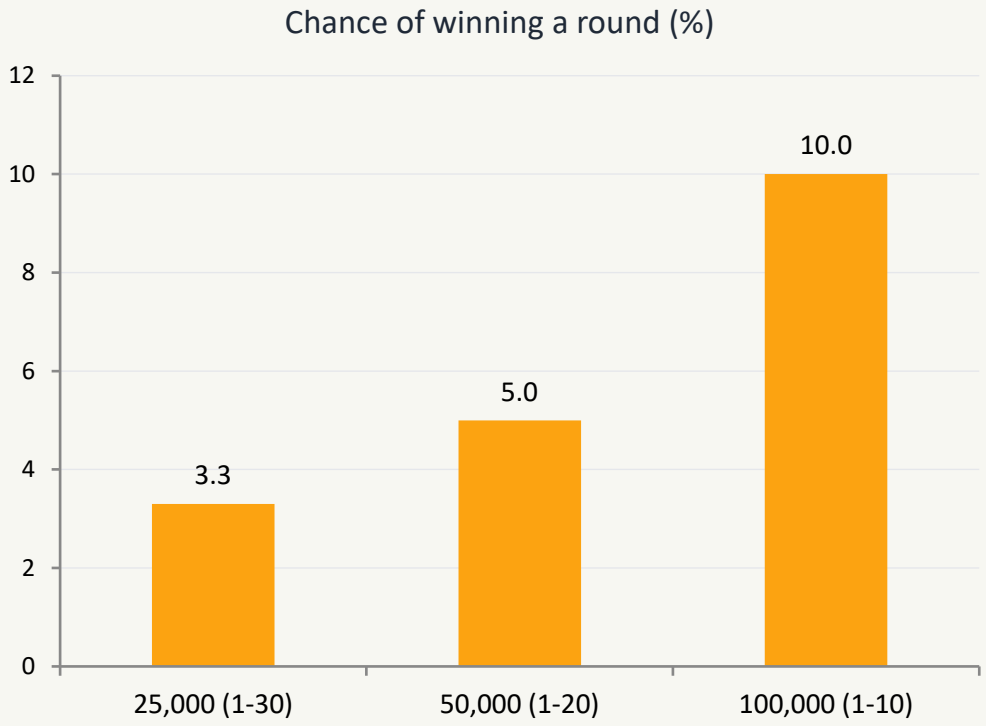

Discounts

- Monthly: 10%
- Quarterly: 15%
- Yearly: 20%

Bug: a quarter or year is priced by quantity only, so longer plans end up cheaper than one month.

Game mechanics and odds

Start

25,000 coins per player

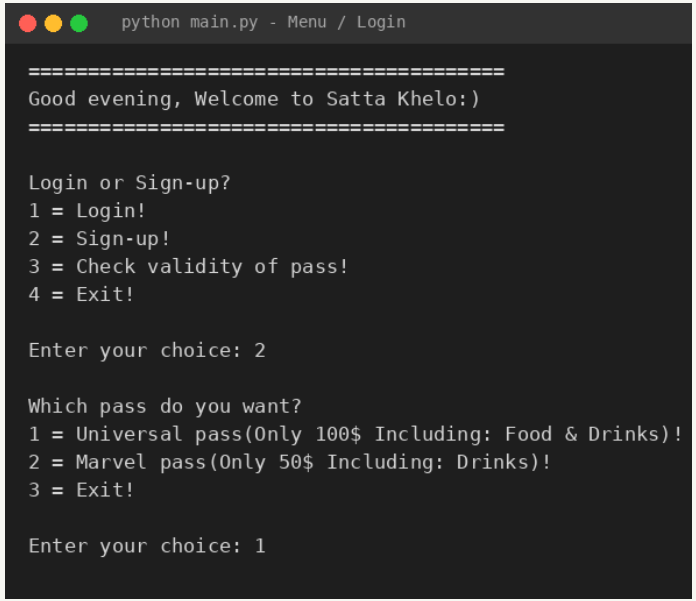

Win

Balance doubles (x2)

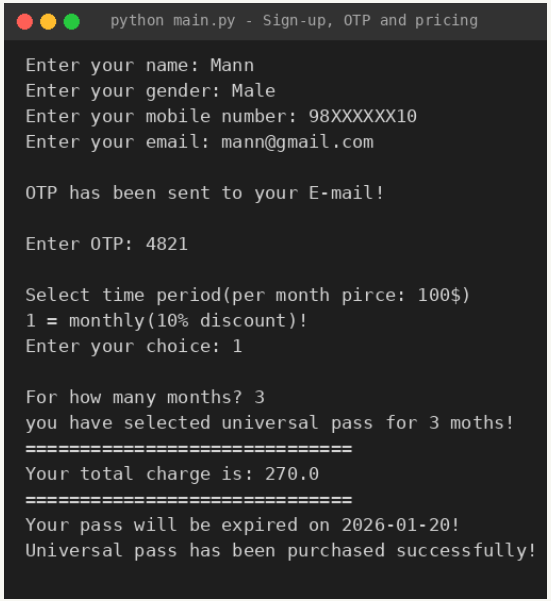

Lose

Stake is subtracted, not zeroed

Demo: menu and sign-up

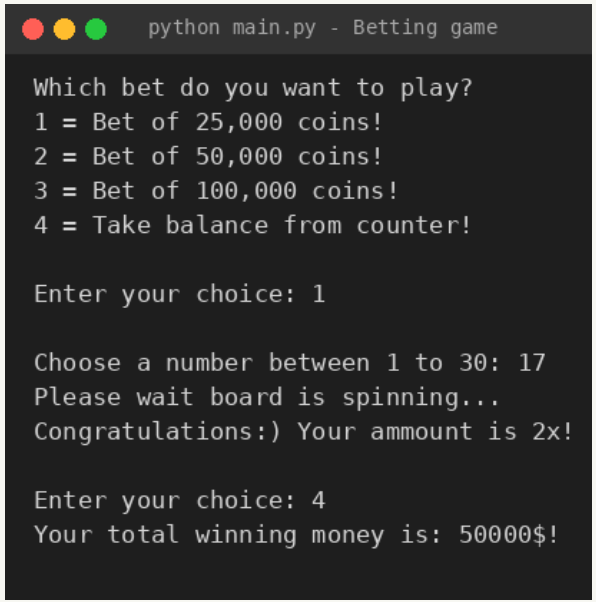

Main menu and pass choice

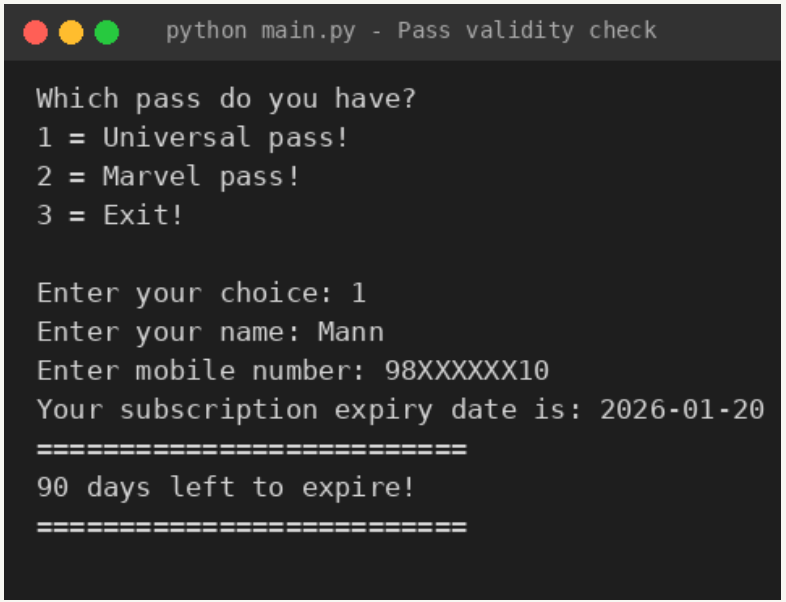

OTP, plan and total

Illustrative console output from a sample run; not captured from a live database.

Demo: game and pass validity

Playing a 25,000-coin bet

Days left on a pass

Illustrative console output from a sample run; not captured from a live database.
